

Quality healthcare depends on a safe and SEC<sup>3</sup>URE environment.

# SEC<sup>3</sup>URE

IntelliCentrics, the security experts, is adopted by more healthcare facilities across seven countries than all of our competitors combined. The SEC<sup>3</sup>URE experience creates an environment with the highest levels of compliance letting everyone in safely. Before SEC<sup>3</sup>URE, only the medical staff was burdened with the responsibility of the environment. Now, every individual entering a SEC<sup>3</sup>URE facility can contribute to preserving patient safety, from physicians, to patient visitors, vendors, volunteers and staff. This environment is as important as the doctors and nurses you choose.

Hospitals have one of the most complex environments in the world. Providing quality care for everyone is our common goal. IntelliCentrics has architected SEC<sup>3</sup>URE, an experience linking people, premises, and protocols together by creating the top referenced and requested compliance standards from 13 regulatory bodies, along with your own policies, to safeguard your facilities. This eliminates the burden of monitoring and managing frequent regulatory changes. By prioritizing safety and security, the SEC<sup>3</sup>URE global gateway creates a less stressful environment for everyone, utilizing the highest standards of compliance across all 50 states and 4 territories. Access to this experience expedites both the facility's and the physician's time to see patients and earn revenue. By sharing best practices, facilities gain the ability to benchmark, expanding their knowledge of safety initiatives and quality patient care. The facilities that are the most vigilant in compliance and security earn the prestigious IntelliCentrics Five Rings Awards.

Providers are now free to focus on their patients, while families are able to focus on their loved ones. Wouldn't you want the best environment for your family? Know before you go.
