

Contactless Check-in,
Visible Compliance

SEC³URE GO!

Your kiosk serves as an access control point to help you enforce the “no badge, no access” policy. However, if the computer system is down or the printer runs out of paper, the cascade effect of a non-functioning kiosk could have a negative impact on your facility compliance.

SEC³URE GO!, our wearable technology and one of the newest innovations, was created to make check-in easy, fast and contactless for all, while raising the level of compliance. The e-badge visually displays the user’s trusted status, as soon as they are checked in from their **SEC³URE mobile app**. Because check-in doesn’t require a kiosk, it also reduces the risk of surface contamination.

SEC³URE GO! alleviates the pain of kiosk upkeep and elevates your facility’s compliance.

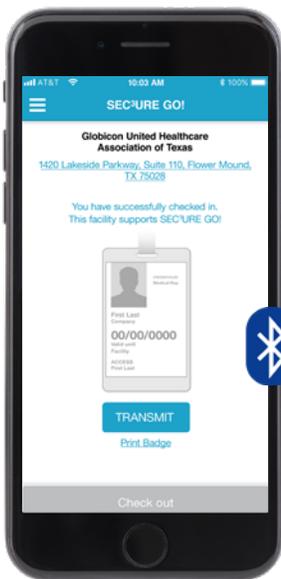

When you set up SEC³URE GO! as your primary check-in method:

- + You offload maintenance work at the kiosk and let your staff focus on other priorities.
- + Your commercial visitors experience contactless check-in and instant access upon arrival.
- + Compliance becomes visible so your staff know who's trusted to be onsite or not.

SEC³URE GO!
allows your staff to easily identify who is visiting the facility and compliant to be on the premises.

SEC³URE GO! is available on our **SEC³URE Ethos** technology platform, which includes industry-leading innovations designed to increase revenue, save time, and provide a safe care environment.

Everyone wins with IntelliCentrics.
